

## Notes for PoA v. 0.9

- On page 6 section 4.1, you write the sentence: "AAU has created a figure of how the honeypot system should work, this is illustrated in the following figure." Without actually showing the figure.
- Under section 4.3 End results, I think it would be better to replace the third of the statements with something like: "An interactive GUI system with the functionality to control the virtualization process and generate relevant data sets in the form of PCAP files"
- Under section 7 "Tools of research", would it be relevant to add a short sub-section describing what platforms we use and the benefits/drawbacks of those? Im primarily thinking of GitHub and Discord. I do see this kind of being listed under section 10.1.3 Materials, but I think you should consider adding an elaborated part in this section 7.
- In section 9,1 you write that the system we're developing will be running on Android operating system. I don't think that is correct. The GUI we're developing for the HoneyPot part of the system, will be running on the linux based operating system "Ubuntu", since the server runs Ubuntu as well. We will have at least some of the virtual machines running Android though.

All in all, I'm really impressed with the work that you guys have made so far. I think this PoA makes for a great foundation, and something we can develop on further as the project moves along and we all learn more about the limitations and possibilities of the system we're developing. Good job!
